FOR IMMEDIATE RELEASE

NRX, together with SAP and ALCIM, demonstrate an end-to-end ISO15926 Workflow

PCA Forum hosted by PETRONAS in Kuala Lumpur, Malaysia

TORONTO, CANADA – December 2, 2008 - NRX, the market leader in asset information management (AIM) solutions, is pleased to announce that together with SAP and ALCIM, it recently demonstrated a complete workflow showing the integrated use of the ISO15926 reference data libraries to build an ISO15926-compliant data model and definitions. The demonstration took place at the POSC Caesar Association (PCA) Forum hosted by PETRONAS in Kuala Lumpur, Malaysia. With NRX Asset Center's ISO15926 data connector, any data in ISO15926-compliant formats, in this case data output from ALCIM IQM, can be loaded into NRX Asset Center, and then synchronized with environments running SAP® software for enterprise asset management (EAM). This complete workflow was demonstrated during the forum to show a practical way to leverage ISO15926 to handle asset master data integration across the asset lifecycle.

NRX Asset Center is an SAP-endorsed business solution that allows customers to fully embrace ISO15926 standards by providing a gateway between ISO15926-compliant asset data and the SAP Service and Asset Management solution.

NRX has long been an active participant in FIATECH's IDS-ADI project to accelerate the adoption of ISO15926 in industry. Nicole Testa Boston, FIATECH Deputy Director, stated the following: "We are pleased to see that NRX, working with ALCIM on the PETRONAS Carigali Information Management (PCIM) initiative, is fully exploiting the ISO15926 tools and methodologies that bodies such as our own have invested so heavily in developing. This is an exciting development, and follows very closely the scope and spirit of industry-lead ISO 15926 initiatives."

At the same time, NRX has formalized its membership of POSC Caesar Association. "NRX has made a significant contribution to the adoption of ISO15926 standards in recent years, and we are pleased to welcome them as part of our organization," said Thore Langeland, PCA Chairman. "Their demonstration at our forum shows their commitment to implementing these standards in rigorous compliance and partnership with the leading associations in ISO 15926 deployment."

NRX Asset Center operates as an open platform with connectors to a wide variety of data stores and standards. With standard integrations with SAP software for EAM, Open Text LiveLink, Documentum, XMpLant Schema, and more, the endorsement of a standards-compliant ISO15926 connector enables asset lifecycle interoperability for all stakeholders, including owner/operators, suppliers and engineering companies.

About NRX

NRX is the market leader in Asset Information Management (AIM) and asset master data management (aMDM) solutions. The NRX solution enables operational readiness for capital projects by reducing schedule and cost, data migration complexity, and accelerating time to full production. For operating assets, the solution enables operational excellence through increases in reliability, and maintenance and MRO supply chain efficiency.

NRX Asset Center is purpose built to address asset information management challenges across the entire asset lifecycle. The solution combines data, document, and project management software and methodologies to enable asset owners and engineering companies to define their requirements; manage the data and document collection and transformation process; and easily deploy and sustain asset information.
